Our Solution: The Inner Workings

How Our Solution Works

Your stock-picks are powered by the critically-acclaimed, computer-driven model of StockDiagnostics

Whether you're a Bronze, Silver, or Gold subscriber, at the heart of your program is a proprietary, computer-driven, stock-selection engine by TRS critically-acclaimed sister-company, StockDiagnostics. Let's take a look under the hood of this benchmark-busting, computer-driven stock-picking machine.

In a nutshell, TRS stock-picking engine uses cash flow data from a company's government filings to arrive at stock picks that are poised to move higher in a hurry. Using cash flow data to identify potentially high-flying stocks is much better than using Wall Street's traditional methods like EPS. And our research has proven, hands-down, that we're right. Read more about our independently-verified, market-outperforming track record.

A storied beginning

To get a truly genuine feel for our stock-picking engine, we'll need to tell you how The Retirement Solution and StockDiagnostics.com began. Both companies are controlled by their parent, Newsgrade Corporation. Newsgrade -- a \$20 million securities financial data company which began in 1997 -- used one of its patent-pending financial tools to figure out why Enron -- the former energy giant -- went bust. And what they found was mind-boggling: Using sophisticated, computer-driven algorithms and stock-picking analytics, analysts at Newsgrade discovered devastating anomalies in Enron's financial data long before it crashed. In fact, Newsgrade's computer systems worked so well they found these deadly problems when the stock was still trading at \$38 a share! Read more about The Retirement Solution, StockDiagnostics.com, and Newsgrade.

With the Enron autopsy in their hands, the top brass at Newsgrade knew they were on to something gargantuan. But they knew they would have to road-test their computer models, stock-picking analytics and algorithms to establish credibility. So, they did just that and dug deep into the financial data of other distressed companies including Sunbeam, Xerox and Polaroid. The results: Newsgrade computer models discovered

A storied beginning

What our stock picking system does

Our stock-picking system is loaded with astounding discoveries and developments

TRS stock-picking system makes earth-shattering predictions

At the heart of TRS stock-picking system is OPS™

You know more about OPS than you think

Figuring out OPS is straight-forward

How OPS predicted the Enron collapse

We use OPS to validate EPS

We've taken OPS to the next level: OPS Rankings

hidden financial problems in these companies too, that eventually led to a staggering \$200 billion loss in shareholder value.

Newsgrade realized that the same tools they used to uncover hidden problems in massive corporations could also be used to provide investors with potentially big winning stocks that were poised for an upside move. To do this, Newsgrade launched StockDiagnostics.com to provide a platform for delivering its benchmark-busting, computer-driven, stock-picking system to professional investors like money managers and mutual funds. Then, in order to deliver these critically-acclaimed products to private investors, they formed The Retirement Solution.

What our stock picking system does

Today, StockDiagnostics.com has spent six years researching and developing its market-outperforming, computer-driven stock-picking software. Now that same high-powered stock-picking system that predicted some of the biggest corporate melt-downs of all time has been re-designed especially for subscribers to The Retirement Solution. The system, continuously refined by our first-class team of analysts ...

Examines, combines and displays financial statement data in unique ways, allowing breakthrough discoveries to be made.

Analyzes and monitors 1,801 data points of over 10,000 public companies, more than 240 industries and at least 12 sectors of the economy.

Is backed-up by multiple patents-pending on technologies, algorithms, formulas and processes, used for diagnosing public companies and share price performance.

Delivers a reliable, cost-effective way to determine how the core operations of a business are doing.

Is capable of reconciling balance sheet and income statement without including investment or financing activities. This shows you the TRUTH about a company's financial position.

Reveals how cash flow is an excellent indicator of how a company's fundamental business plan is working and reflects on how management deals with corporate problems and challenges.

Provides continuous cash flow (operational cash flow and free cash flow) monitoring and alerts on over 10,000 public companies including amended filings.

Conducts ongoing internal research on companies, industries and sectors.

Identifies -- through sophisticated, automated quantitative analytics -- companies that report "cashless earnings". This can be an early warning signal to credit quality problems.

Discovers opportunities in the form of companies reporting positive cash flow anomalies with no earnings.

There is no other benchmark-busting, computer-driven, stock-picking system that does even a fraction of what TRS stock-picking system can do. We have looked around, and we can't find anything even close. And even if there was something else, chances are only professional investors -- like money managers and pension funds -- would have

TRS can help you grow your nest egg faster than most mutual funds

We offer a simple, just-follow-the-portfolio program

We use a patent-pending, fully objective research model to drive our stock selections

Our track record speaks for itself...

access to it because the cost would be absolutely out of this world. However, a subscriber to The Retirement Solution gets the power of our most potent stock-selection system at a very reasonable price. Subscribe now
